

The lifetime of an order is confusing. Communication and transfer of data take place in different ways and different types of media. With each step, there can happen mistakes and data loss.

Vaira cleans up the chaos. We optimize the whole process, including the measurement and the documentation, together with network operators and construction companies. The digitalization can save money, time and nerves of any worker within the progress.

Thinking processes digital

Current Problems

Archiving analog data is expensive and the data sets aren't searchable

Order data keeps traveling in cars for some time

Taken photos of the construction sites don't have a proper platform to be uploaded to by the construction worker and are sent in different ways to the continuation

Some orders have to be redone because of mistakes in sketches, the fine-drawing or the transfer into own systems

Daily reports must be inconveniently and timeconsuming collected and made available to others

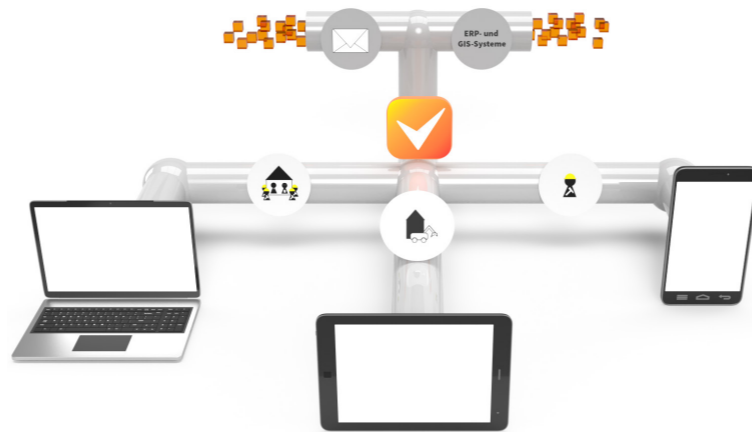

Accidentally wrong out-filled documentations

Higher costs because of queries, employees for data checks of incoming data, process delays, ...

Information transfer with many media disruptions (E-Mail, Fax, Mail, Phone-Calls,...)

Reconstruction of the measurement situation almost impossible because of late ... information transfer

Our solution

The full process in one coherent system

Order creation, disposition, documenting and accounting – all process steps can be realized on our platform Vaira.

Seamless transitions, perfect overview

Orders and their results are visible to all eligible persons in realtime. For the first time the live tracking of progress of orders is possible.

Complete and correct documentation

By checks for conformity, mandatory fields, and photos for any measured point, the results are complete, as correct as possible and the measurements are replicable by office workers.

Replicability even after years

Thanks to the automatically taken photos it is possible to reconstruct the past measurements properly.

No media disruptions anymore

We say goodbye to mistakes that sneaked in while transferring analog data into digital systems. All data is collected and kept digital all the time in our system.

Meeting point of the network community

With partnership functions, different companies can connect to each other on Vaira so communication becomes quicker and better documented.

All communication in one place

An internal chatting feature enhances the communication and order management within the company and the contact between network operators and construction companies.

Secure and searchable data archive

All data is encrypted saved multiple times, making it as secure as possible. The digital data set can easily be searched by keywords, making it faster than analog folder searching.
