## Costs and License Model

With Vaira all digital processes can be thought analog. The main advantage is surely the automatization of to date still mandatory process steps. This saves time and capacity for really necessary work – intuitive, fast and with more data quality than ever before.

We work together with different network operators and construction companies to match our application best for any industry's needs. Meaning not only features but also a license model that suits both sides of the process and that allows individual configuration.

**More than 60% saving compared to today's analog measurements!**

	Construction Worker	Construction Worker with Vaira	Surveyor
Disposition	7,00 €	0,50 €	2,50 €
Data Collection	7,00 €	0,50 €	-
Measurement & Sketch	19,00 €	1,25 €	70,00 €
Fair Drawing	10,00 €	-	32,00 €
Administration	7,00 €	-	42,00 €
Continuation	42,00 €	18,00 €	-
Queries	2,50 €	-	-
Vaira	0,00 €	13,00 €	-
<b>Costs per Order</b>	<b>94,50 €* </b>	<b>33,25 €</b>	<b>146,50 €* </b>
		+ 64,81%	+ 77,3%

### Flexible Model

Splitting costs for an order differs strongly within the whole industry, for example regarding the needed amount of construction companies included. Also, the requirements are quite different. Some only need simple sketches, others want the full construction site documented as good as possible.

We know about those different demands, hence we made our license model as flexible as possible. Different feature packages allow you a perfect fit into your needs. Also, the number of needed orders is calculated into the model. Payment takes place in regard to your bought contingent of orders and monthly fees per user. This differentiation in orders with features and user costs allows an easy split of costs between the network operator and the construction company.

\*These numbers are based on our experiences and talks to people of the industry. They shall illustrate the potential for savings and may vary according to the size of your company and its structure.

Digital detox – less becomes more!

## Digital Process Optimizing

Current process chains of order creation up to their accounting take a long time, every step in between needs bureaucracy and additional waiting time. Vaira quickens each step or even automatizes it, hence eliminating waiting times completely.

Orders, all data and results are synchronized between the office and the construction worker in realtime. No sketches are needed anymore, the construction worker gathers vector data by using Augmented Reality mea-

surement that can later be fit into your GIS using reference points. This also directly creates a fine-drawing for the construction worker and the office users. Additional data can be gathered by using form fields that can be directly connected to your ERP systems.

There is no transfer needed anymore from analog to digital. This eliminates a lot of potential transferring errors and queries towards the construction worker: resulting in six instead of twelve weeks time for one order.

**MORE THAN 50%  
TIME SAVING**

**CONSISTENTLY  
DIGITAL, NO MEDIA  
DISRUPTIONS**

### Create orders fast and easy

You can easily and comfortably create orders in our web application or the smart-phone app. The App is based on simple tasks like filling in forms, taking photos or measuring. Those tasks can be completed in any order, can be mandatory or optional. Completed orders are synchronized in realtime with all accounts that have the right and the need to see progress and results of the order.

By using a favorite system you can easily recreate new orders based on old orders, saving time and costs for the preparation workers. By defining user rights and user group rights you can simply manage who sees what and when. The web application also gives an overview of all current orders, containing all progress and final result data.

### Ending the scribbling

With Vaira a lot of current process steps can be automatized or completely eliminated. The measurement in Augmented Reality makes measuring as simple as it can be. Miswritten, forgotten or not readable numbers are an artifact of the analog past. The complete digital process always creates properly readable and correct numbers that don't need any queries anymore and may also be automatically transferred by interfaces.

Don't fear the digital world – everything will become better!

## Future and Data Security

Digitalization means more than just saving money. Everything has also to be and to stay reliable, secure and future-oriented. This is why we don't sell Vaira as a piece of software one-time but as a Software-as-a-Service (SaaS).

By this, Vaira is always up to date, getting new features and security updates as you are using it. Our application will not outdate and you won't be obliged to buy a new piece of Vaira 2.0 in the future. Instead, you are able

to just integrate new features easily into your own processes. Your data also won't outdate but stay usable all the time.

Data security is another keyword that we are very keen to ensure. This is why we use Cloud Services. The services we use are not only good secured but also very well mirrored all over the world, meaning that data loss or theft is nearly impossible. Cloud services also ensure that you can your data from anywhere at any time.

**TRACKING OF  
ORDERS IN  
REAL TIME**

**BETTER  
OVERVIEW AND  
SECURITY**

### Better quality in less time

Order's results are accessible fast, complete and as graphics, numbers and text data sets. No more fine-drawings in the evening or misinterpreted scribbled numbers anymore. These data sets can be synchronized with your systems by open interfaces that we offer. Hence, your worker's power can be used in works that are really needed and not for transferring data from analog to digital.

### Consistently digital, consistently usable

Altogether, seven steps in a casual house connection process can either be simplified, quickened or even skipped by using Vaira. This is also possible thanks to the secure, stable and hence important Cloud Services. With those, all your data is multiple times backed up and can be accessed from anywhere at any time.

Yet, Vaira is also usable without an internet connection on your smartphone. We implemented offline compatibility that enables you to synchronize orders once. After this, you may work with it offline and synchronize it as soon as you have internet connectivity again. This also makes synchronizing only via WLAN possible while still keeping all features functional.
